

BLAZE NEW TRAILS WITH WALL JOINTS

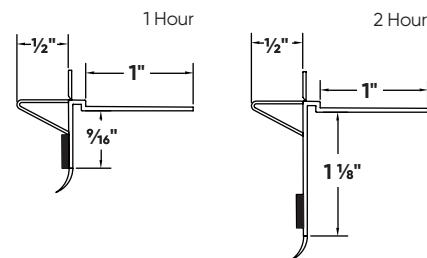

- Fire Bead is equipped with cutting-edge firestopping technology to halt the passage of smoke, fire and sound
- The flexible $\frac{1}{2}$ " gasket located at the bead's apex provides protection for up to $\frac{1}{4}$ " of building deflection, and unlike caulk, is designed to stay flexible for the lifetime of the assembly
- Fast, simple and cost-effective, Fire Bead is available in 1- and 2-hour fire ratings

It seems simple enough to do the caulking, but it's usually a messy process... Where this stuff, any of my finishers can put it on.

- Jesus Gutiérrez, Drywall Foreman
